AutoCAD Architecture Highlights
A.DWG (.DWG) drawing is the native file format used by AutoCAD. It is a vector-based format, meaning it can be scaled up and down without loss of quality. This makes it ideal for drafting very large designs. The current version of AutoCAD (2017) allows the creation of .DWG drawings at a resolution of up to 1 million points.

Organized into a hierarchy, AutoCAD Architecture allows architects to view, edit, and organize all the elements of a complex architectural design, such as walls, roofs, and facades, with ease. The figure above shows the base layers and objects included in the AutoCAD Architecture. Design elements include following: Wall: Walls are the main building block of the architectural design. Examples of third-party AutoCAD plugins include: AutoCAD Electrical, free add-on to AutoCAD, created by Microtherm. AutoCAD Architecture, free add-on to AutoCAD, created by DWG Publishing. AutoCAD Inventor, free add-on to AutoCAD, created by DST Systems. AutoCAD also includes native tools for generating some of these files, such as: DXF (AutoCAD Exchange Format). These files are 2D (X,Y,Z) coordinate based files; in this format the DXF is the same as the.DWG. DXFG (AutoCAD Exchange Format Graphics). These files are 2D or 3D graphic-based files; in this format the DXFG is the same as the.DGN. In some AutoCAD add-on

products such as the AutoCAD Electrical and Architectural Products created by DWG Publishing and Microtherm, the DXF, DXFG and DXPL formats are usually not converted to .DWG, .DGN, .DWGS and .DPL, respectively, by the product but rather translated to an intermediate XML format called BIMLXML. The BIMLXML files are converted into .DWG, .DGN, .DWGS or .DPL format by the product. DXF, DXFG and DXPL are proprietary formats only used internally by AutoCAD. Notable third-party products that import or export to or from AutoCAD are: Microtherm's AutoCAD Architecture and AutoCAD Electrical. Both of which

with symptomatic uterine leiomyomas. To describe the pattern of reflux after myomectomy in women who have symptomatic leiomyomas. Thirty-seven women with reflux-related symptoms underwent cystoscopy, and endoscopy with chromoendoscopy, after myomectomy. Reflux patterns were described in terms of proximal-to-distal extent, distal extent, number of refluxing episodes per day, and symptoms. Women reported an average of 2.1 (range 1-4) vaginal and 0.3 (range 0-2) abdominal pain/discomfort episodes/day. Urinary frequency was reported by 23 women (62%), urinary urgency by 14 women (37%), urinary tract infections by 8

women (21%), and urge incontinence by 14 women (37%). Uterine prolapse was reported in 6 women (16%).

There were 18 endoscopically visible reflux episodes; 21/37 (57%) had proximal reflux, 8/37 (22%) had distal reflux, and 8/37 (22%) had both proximal and distal reflux. Menstrual abnormalities were found in 6/37 women. The incidence of reflux after myomectomy in women with symptomatic leiomyomas is comparable to the incidence reported in other
