Photoshop has become a must-have tool for any digital artist, graphic designer, or web designer who works with images. Starting with Photoshop CS6, this new version of Photoshop allows you to work with images directly on the tablet screen. See the next sections for more on Photoshop for Tablet. Creating a Vector Image An image in the digital world is called a raster image, which basically means that it's a digital representation of an original photograph taken by a camera. A vector image, on the other hand, doesn't rely on pixels. It relies on mathematical formulas that allow you to create shapes, curves, and lines without using pixels. Vector images are sometimes called bitmap images because a bitmap image is essentially just a collection of pixels that form the image. Vector images are created in a design program, such as Adobe Illustrator, or CorelDraw, and then converted into a raster image (a digital file that holds image information) that can then be edited with the raster-based program Photoshop. All the following images in this section were created using CorelDraw. If you want to create your own vector images, you can, of course, use other design programs, such as Adobe Illustrator, Adobe InDesign, or even Microsoft Word. Why would you want to use a vector image as opposed to a raster image? Because the vectors are a lot cleaner looking, which means that your image will be easier for you to work with. You don't want to waste ink and toner on a picture that turns out to be too detailed for its intended purpose. And because the image will be pixel free, the quality of your image is much more stable, as you can't accidentally change the pixels in the picture. You'll see more about resizing vector images later in this chapter. You may want to convert the vector image into a raster image if you're going to work on it

Typically the faster computer we have at home is always used for everyday tasks and to edit photos, but there are many occasions when you need a faster computer for your graphics editing projects. Regardless of whether you are a Photoshop user or not, the internet is full of tutorials and guides on how to edit graphics faster, faster… In this article, I will show you what I found the fastest when editing images using Photoshop Elements on your computer. I will try to provide tips to make your time editing photos shorter and smoother! Note: If you're looking for how to create memes or animated emojis in Photoshop, check out my article here. Image Editing The fastest way to edit your photos in Photoshop is by using the commands or menus. But if you're like me, you want to use your keyboard as much as possible. You must first start by organizing your computer. Open your computer and make sure that the relevant programs are set up to be open and functioning. Please note: Some people prefer to have their Windows start menu open and that's perfectly fine. Now that you are all set, the first step to speed up image editing is to open Photoshop Elements. It is saved in the same location you saved your photos, it may be somewhere else if you use a different file manager. Start Photoshop Elements. Click on the Edit > Preferences menu at the top right. Then make sure that Photoshop Elements is set to be the default program used to open pictures. There are a few other options you can play around with. I'll only get into the relevant ones here. You can choose from different versions of Photoshop Elements (up to a maximum of version 20) and even a specific model. There are a few other options you can play around with. I'll only get into the relevant ones here. You can choose from different versions of Photoshop Elements (up to a maximum of version 20) and even a specific model. There is an option to add shortcuts to the program on your desktop. It's worth it to add a shortcut because it is much easier to reach your program than when you search for it on your desktop. At the bottom of the window there is an option for opening files automatically. Make sure that it's set to the default option (Saving a copy) or else all the files you open will 05a79cecff

Hatch Patterns are a quick way to create complex design elements. They're also useful for creating eye-catching background elements. Designer Pencils are another type of illustrative tool. Their points have a variety of shapes and effects. You can adjust the size of a designer pen by clicking on its side and using the + or − keys. Photoshop's Gradient tool lets you create sophisticated and realistic-looking gradients. You can change the direction of the gradient using the left and right arrow keys. Fist is probably the most widely used feature in Photoshop. It allows you to draw around objects and paths. You can use the mouse, Pen tool, sculpting tool, or even a tablet. Paint is the most basic tool in Photoshop. Its controls are fairly straightforward. They consist of eraser and brush; you can also use the magic wand and airbrush. Photoshop's HSL/HSL Color panel gives you an easy way to adjust the tone, saturation, and brightness of an image. You can do a great variety of adjustments to images using the Levels and Curves panel. And you can move, rotate, crop, and resize an image using the various tools available in Photoshop. Choosing the right brushes When you first use Photoshop, it is likely that you will want to use the entire selection of brushes available in the program. However, you may want to narrow down the brushes you use by mixing different ones. You can do this by choosing the Brush Picker in the Brush Panel. Brush Picker opens a new, empty document. It is then up to you to decide which brushstrokes you would like to use for this new document. You can then start using these brushes in your images. There are several different types of brushes in Photoshop, including drawings and painting brushes. Decorating Brushes are ideal for decorating a photo. You can use them to add flowers or different textures to an image. Brush Sets are designed for painting and drawing. You can use them to create sophisticated designs in your images. Oil Paints are used for creating blurry textures. You can use them to create a slightly out of focus feeling in your image. Photoshop's Pencil tool can be used to draw an image layer directly onto a photo or canvas. The tool is most useful for objects that you want to add to an image. Image Brushes are

Family of a man killed after being hit with a stray bullet while eating dinner last week has filed a wrongful death lawsuit against the teen who allegedly fired the shot. Vincent Lozano, 50, was eating in the backyard of his home in the 3600 block of East 260th Street Tuesday evening when the incident occurred. He was struck by a bullet in the head and left the scene in critical condition. He was taken to St. Joseph Mercy Hospital, where he later died. The lawsuit against the 17-year-old boy who allegedly fired the bullet also seeks damages against the teen's parents and an undetermined amount of money for funeral expenses. Ald. Eugene Schulterman said he doesn't know why the boy fired his gun on the street in front of Lozano's home. "I don't know why," Schulterman said. "They're all 17 years old. They don't know any better." A public records request provided by Lozano's family to St. Joseph Health, the health network for St. Joseph Mercy, and the Milwaukee Police Department revealed Lozano was taken to the hospital on multiple occasions at least since Jan. 17 for injuries sustained from gunshot wounds. The records did not include more recent hospital visits. Ald. Schulterman did not know when the shooting allegedly occurred but said he heard about it on Wednesday morning. He said the teen is a member of his ward's community council and that "this affects the entire community." The lawsuit asserts that Lozano and his family live in the same neighborhood and that the 17-year-old boy has "injured the deceased and his family, and further injured innocent citizens by recklessly and negligently shooting at them." The lawsuit doesn't name the teen as a defendant. Schulterman and several police officers visited the scene on Tuesday. Officers took photos of the street and sidewalk where the teen allegedly fired the shot. There were also "dozens" of shells all around the scene, the alderman said. "I guess the kid was trying to make some points by shooting at this person," Schulterman said. Lozano's relatives said they didn't know the teen or have any idea why he fired the gun. "No clue," one man said. The family said they believe the bullet that struck Loz
