Autodesk started developing AutoCAD for the Apple IIe in 1982 as a desktop app for Apple II microcomputers. Initially, an Apple IIe mouse was used to move a cursor over the screen. Then in 1983, the use of a trackball was added. The first AutoCAD for Apple IIe was the Construction Suite and was released in February 1984. At that time, the new AutoCAD for Apple IIe was called "AutoCAD 1.0" and the Apple II/Apple IIe, the first Apple computer, was only 12 months old. In 1986, Autodesk released AutoCAD for IBM PC compatible computers. The Autodesk release of AutoCAD for IBM PC, was called "AutoCAD 2.0". In 1991, Autodesk released the first version of AutoCAD for the Macintosh. The Macintosh was a new platform and the first products were more "desktop publishing" related. The company's developers decided that they could make a better product if they used the same approach as the other releases, which was the PC version. The first version of AutoCAD for Macintosh was called "AutoCAD 1.5". The Macintosh versions of AutoCAD have remained compatible with the PC versions. The first release of AutoCAD for Windows was called "AutoCAD 2.1" and it was released in October 1991. In 1992, Autodesk introduced AutoCAD Structural for Windows to support the design and construction of steel reinforced concrete buildings and was released as AutoCAD Structural 2.0. With AutoCAD Structural 2.0, Autodesk introduced a computer-aided-manufacturing (CAM) product called "StruCAD" in 1995. It was a software product that allowed users to create assemblies on a single screen and then move the parts into the manufacturing software. The Autodesk release of AutoCAD Structural 2.0 was called "AutoCAD Structural 2.1". The first release of Autodesk Architectural Desktop for Windows was AutoCAD Architectural Desktop 1.0 in 1995. Autodesk Architectural Desktop was renamed "AutoCAD" in 2001. Autodesk

released AutoCAD for Windows in 2003. The first version of AutoCAD was AutoCAD 2002 and it was an update of the Microsoft Windows desktop edition of AutoCAD 2000.

3D design The top-level groups of AutoCAD are used to design engineering and construction projects. The top-level groups are Parts, Shapes and Models. The latter groups are mostly the same in AutoCAD LT, the exception being the Model group. The AutoCAD top-level groups are organized into a hierarchical tree which is similar to a drawing, with the Root group being the document, Groups, and Parts being the first-level children of Groups. The Root group is also the root container, and the root container group is a special group named Group. The top-level groups correspond to various drawing entities. A "Part" in AutoCAD is a basic geometry used to draw a model. It can be combined with "Shapes" to form a "Shape", which is a collection of "Parts". A "Shape" can be combined with "Model" (now a top-level group in AutoCAD LT, formerly a group in AutoCAD) to form a "Model". A "Model" is a collection of "Shapes", and a "Model" can be a container for other objects and groups. A drawing can contain multiple models, and a model can contain multiple drawings, depending on the amount of detail in the drawing.

Any component is a representation of a particular entity, typically (though not exclusively) a particular object. Components can be named and given properties. There are two types of component in the object-oriented hierarchy, "component" and "DrawingComponent".

Components can be used to define items such as forms, lines, arcs, circles, polygons and solids. Drawing components are used to define items used in a drawing (see cross-reference). Components have no inherent properties, so most of the properties of a drawing component are used to describe properties of the drawing objects that it represents.

The component also provides a way of expressing a particular set of properties of a drawing entity. The component hierarchy also includes "Drawing", the top-level object in AutoCAD. The drawing can contain any number of components and other drawing objects, including parts, shapes, models, and so on. A component is an abstract representation of a particular geometric entity. A component represents the generic shape of the geometric entity, for example, a circle, af5dca3d97
