"Index out of range" in Android SDK 2.2 Hello, I'm working on an Android app for my college so I need to maintain a version for Android 2.1. If I try to compile with my app into the emulator, I get an error: "Error: IndexOutOfBoundsException. Index: 1. First element: 0. Next Element: 1" I understand that index 1 is out of range and the function includes an argument that cannot be defined since it depends on the width of the device, but the emulator is still 2.1. I was hoping to use the emulator to debug since it isn't a lot of effort to compile in the device but don't know if that's possible. Thanks in advance. A: Android 2.x is going away soon. You should support Android 2.x no matter what version of Titanium you're using. Not supporting 2.x will likely lead to issues if your app is deployed to the Google Play Store. Read Part 1: "Coherence, Physicists, and the Origin of Our Universe" I found that the oscillations of a QM oscillator could be approximated as a classical bouncing electron. I was able to simulate a Quantum Mechanical oscillator through the dynamics of an imaginary classical system. And due to these simulations, I could capture and figure out exactly how the dynamical relationship between the different parts of a quantum system are dependent on the interactions that define the system. Here's the article: I thought this was pretty cool. Of course, the correct and usual way to understand "how the dynamical relationship between the parts of a quantum system are dependent on the interactions that define the system" would be to analyze the wave function of the entire system in the Schrödinger picture. Or to just look at the density matrices. But I did not have
