
All Time Low - Nothing Personal [FLAC]

[Download](#)

sorry, all my audio cds are oldies, so i have no idea what the rip quality was like back then. but you can really imagine the difference. from the technological side as well, choosing to rip at level 8 might not be a good choice. the 8000 beats per minute is really no problem for most players, but if you're ripping cds at 24bit (or 24bit/96khz) you have to reduce the sampling rate in your player from the original 24bit (or 24bit/96khz) to get the playback right. congrats on your 300 track collection! do you know anyone who is active in the audiophile community? maybe someone could rip a few mixes and send them to you. or maybe we could arrange some kind of swap and a collection of tracks are traded. yup. mediaman, winxflac, and those, as well as some standalone progs, have flac levels all the way up to flac 64. the problem is that none of them is very easy to use. the default settings in winxflac are to convert only the first bitrate in the cd, so the 16-bit encoder is downgraded to 8 bit. imo, the cd is

corrupted by the downgrading, especially if the cd is encoded with variable bitrate. i figured out what was happening. i had my flac cli set to 128. i set it to 256. it was much faster. i set it to 256 again. it seemed to get slower. i used xcdroast to verify my encoding settings. for some reason, it's not letting me save my settings. a star. coming back to it later. i used exact audio copy for the encoding, i set the bitrate to 15360. this gives an optimal quality with other values. it's not a great target quality, but my flac files are barely larger than the mp3s they replace.

All Time Low - Nothing Personal [FLAC]

yes, that is a very good idea. it's quite likely that the compression level would be the same (or close enough) after the ripping process, so ripping directly to flac (or ogg vorbis) would eliminate the issue. as an example, let's say i ripped an album to ogg vorbis. i then want to rip the same album to mp3. i would change the command line that was initially used to rip the original album to this (expanding the path, removing the title/artist, the album name/title, etc.): gksudo nautilus /media/username/title/album then, i would start a new nautilus instance and go into the file browser. right-click on a flac file, select extract here to a folder on the local drive. since the flac tracks are still marked as being flac (it seems that only the container's are effected), the compression levels of the original files should be the same as they were originally (which is the lossless compression of flac). then, i would right-click on the extracted (new) folder, select open with so that the folder can be opened with ogg vorbis. decoding before encoding causes significant amounts of loss (way more than in the ogg decoder example), and also significantly increases file size. this is because each of these files has more bits to encode, which means that a larger file needs to be streamed. qobuz may not have the same clout as tidal or even amazon music hd, but its a great high-resolution streaming service, and the first one with 24-bit audio streaming on sonos. it has a 70-million-plus catalog of tracks to choose from, though youll have a harder time finding niche indie artists on this platform compared to something like spotify. what makes qobuz unique is its online store (no subscription required) where you can purchase high-resolution digital audio files. you and your friends can even make collaborative playlists on qobuz, something apple music has yet to offer. if youre not sure whether this is the service for you, qobuz offers a one-month free trial period to prospective subscribers. 5ec8ef588b
